105 spots.

Updated several times a day. What the levels mean.

For swimming and water sports. Forecasts, not water tests. Tools for clubs, centres and events.

About these forecasts

For each spot, SwimSignal traces the river upstream, finds every monitored storm overflow whose water reaches it, and combines what those overflows are doing now with how likely each is to spill over the next five time, bacterial die-off and dilution. It is a forecast, not a water test: "low risk" is not a r, and inclusion of a spot is not a statement that it is safe to swim there. How accurate
