River · River Thames

River Thames, Port Meadow, Oxford

Moderate risk

Sewage spills tomorrow

High risk on Saturday

Take more care: young children, older people and anyone with a weakened immune system may want a lower day or spot.

This forecast counts sewage from the monitored storm overflows upstream, and the rain that makes them spill. It does not count treated sewage from sewage works, runoff from farmland and roads, wildlife or other bathers.

Issued Tue 06:39, 1 h 51 min ago

Pollution risk, next five days

About 9 of the 29 overflows upstream are expected to spill today, about 16 on Friday.

Today	Low
Wed	Moderate
Thu	Moderate
Fri	Moderate
Sat	High

A forecast, not a water test: check the signs at the water before you swim. This is not a designated bathing water, so the Environment Agency does not test it for bathing.

E. coli estimate

57%

Untested in October

Chance a water sample would show E. coli over 900 per 100 ml today; 68% tomorrow. The level above counts sewage spills. This estimate counts E. coli from any source, but it is tested only for May to September, so it is not part of the level now. It has not yet shown skill on live samples: on the 39 Environment Agency samples since the forecast began, it did no better than chance at picking out the ones over 900.
